ROBOTIC PROCESS AUTOMATION (RPA)  
- The Impact on Internal Audit

©2017. This document is the proprietary and confidential property of RGP.
Agenda

- Introduce RGP and Presenters

- Objectives of the Session
  - Understand Robotic Process Automation (RPA)
  - Summarize the Opportunity Areas & Value Drivers of RPA
  - Identify Current RPA Solution Providers
  - Understand the Criteria for Scoping & Prioritization of RPA Opportunities
  - Provide an Example of RPA Utilization
  - Understand How RPA Applies to Internal Control
  - Understand the Risks of RPA
  - Understand the Impact of RPA to Internal Audit
Our Company

- Founded in 1996 as part of Deloitte

Program Management ▪ Project Management ▪ Change Management

Finance & Accounting
Governance, Risk & Compliance
Information Management
Human Capital
Procurement & Supply Chain
Legal & Regulatory

3,000+ Consultants Globally

70+ locations worldwide

87 of the Fortune 100 Have Been Clients
What is RPA?

- **RPA** is not a physical “robot” but a configurable software, that sits on top of a company’s existing IT infrastructure, pulling data, performing algorithms, and creating reports.

- The “robot” is configured to complete the same process steps, follow the business rules, and use the same systems that a human does today.

- RPA makes the most significant impact on manual work processes, that are repetitive and recurring, and often have high human error rates.

- A single “robot” can be configured to performed a variety of processes enabling multi-use robots, and variability as your business needs change.

- The initial implementation of RPA can happen in weeks and typically delivers an ROI of greater than 5:1, often recouping the investment in the first year.
RPA Insights

1. Current State

- The automation journey is prevalent across all industries and functions
- A classic candidate for RPA would be one where three characteristics are present:
  - The tasks or actions are consistent, with the same steps being performed repeatedly
  - The process is template driven, with data being entered into specific fields in a repetitive manner
  - The process is rules-based, to allow decision flows to alter dynamically

- By 2019, process automation will have limited impact on top-line growth for 50% of organizations that will erroneously focus on labor reduction, not on improving business outcomes
- By 2020, automation and artificial intelligence will reduce employee requirements in business shared-service centers by 65%
- During the next three years, more than 50% of service automation projects will be abandoned or will fail to deliver anticipated benefits
- 110 -140 million FTEs could be replaced by automation tools and software by 2020

What are the Key RPA Value Drivers?

CXOs: “We Need to…”

“Reduce operating costs and processing costs while increasing security”

“Provision a compliant, scalable, resilient and flexible digital workforce to the operation”

“Increase productivity / deliver better services faster”

“Hire, train and deploy workforce that is agile and flexes to business needs”

“Deliver value by increasing margins, reducing costs and operating more competitively”
What Do We Automate?

Easiest to automate repetitive, high-volume, operational processes

Back Office Examples:
- New hire simplification
- Account Management
- Off cycle pay
- ACA validation
- Garnishment processing
- Tax processing
- Pre and post payroll activities
- Leave / vacation management
- Training automation & reminders
Potential Applications of RPA

Sales/Services
Order to Cash, Account Setup. 24/7
Customer Service Support, Customer Complaint Tracking

Procurement
Vendor Setup, Requisition to Purchase Order, Invoice Processing

Finance & Audit
Accounts Payable, Accounts Receivable, General Ledger, Payments Processing

Tax
Sales and Use Reconciliation, Tax Master Data, Monitor / Renewal Processing

HR
On-boarding / Off-boarding, Payroll, Resume Screening / Matching

IT
Account Setup and Maintenance, Internet Checks & Processing, Database Checks & Clean-up
RPA Hard and Soft Potential Benefits

- Reduced Costs
- Improved Quality
- Increased Security
- Improved Compliance & Reporting
- Upgraded Analytics
- Increased Employee Satisfaction
- Improved Operational Control
RPA Video Demo

Sales & Use Tax Reconciliation
Leading RPA Software Providers

* Source: The Forrester Wave Robotic Process Automation, Q1, 17
Purpose of Document: This will be the output document following the Process Maturity and Impact Assessment. It will highlight, in a clear way, the processes most suitable for automation, as well as those with the highest risk associated. For example – A process may have high value to automate, but will cause significant impact and has high risk associated with the transition. It might be better to consider moving lower risk processes across first to win trust and demonstrate potential value.

Key:
- Green indicates those processes that have low risk associated with moving them into an automated state.
- Amber indicates those processes that have some risk associated with moving them into an automated state.
- Red indicates those processes that have high risk associated with moving them into an automated state.
RPA Common Capabilities

- Opening email and attachments
- Logging into web/enterprise applications
- Moving files and folders
- Copying and pasting
- Filling in forms
- Reading and writing to databases
- Scraping data from the web
- Making calculations
- Connecting to system API’s
- Extracting structured data
- Collecting social media statistics
- Following “if/then” decisions/rule
Example of RPA Utilization In Bank Reconciliation

**Treasury**
- Save monthly Bank Statement to G:\
- Follow-up with treasury / online

**RPA Bot**
- Searches email folder for new statement
- Opens and reads statement data
- Opens previous months “Recap file”
- Dates the mode of receiving statement
- Check for any bank activity for previous month
- Mark & date as “No Activity”
- Any activity?
  - Yes
  - Look-up a/c# electronic statement with a/c# on recap sheet
  - Input region #, district# & district name on electronic statement
  - Mark and place statements in respective files by regions (30)
  - Mark & date as “No Activity”
  - Follow-up with treasury / online
- No
- Statement received?
  - Yes
  - Reconcile statement with FIN
  - Does it reconcile?
    - Yes
    - Change status to ‘finalize’, date and initial “RPA”
    - STOP
    - No
    - Change status to ‘finalize’, date and initial “Person”
    - Entry found?
      - No
      - Change status to ‘finalize’, date and initial “Person”
      - Entry found?
        - No
        - Change status to ‘finalize’, date and initial “Person”
        - Yes
        - Call office to gather missing inputs
          - Zero balance transfer
          - Journal entry
          - Verify deposit
          - Bank activity
          - Change status to ‘finalize’, date and initial “Person”
          - STOP
- No
- Change status to ‘finalize’, date and initial “Person”
- Stop

**FIN Team**
- Determine reason for missing entry
- Change status to ‘finalize’, date and initial “Person”
- Stop

Example of RPA Utilization In Bank Reconciliation
How Can RPA Be Applied to Internal Control?

RPA can be applied where there is a high volume of routine, labor intensive and mundane activities performed on a day to day basis by the 3 lines of defense:

- Operate a control based on a predefined frequency, acting as a Control Operator, and evaluate a control’s operating effectiveness by performing periodic control self-evaluations, acting as a Control Owner (1st line of defense).
- Evaluate a control’s operating effectiveness by performing periodic management testing of control effectiveness, acting as an Internal Control Tester (2nd line of defense).
- Evaluate a control’s operating effectiveness by performing periodic independent testing of control effectiveness, acting as an Internal Audit Tester (3rd line of defense).
This All Sounds Good But What About the Risks?

We can’t just ask “how can we utilize RPA?”, we must also ask “how does RPA impact our risk profile?”

- Data Governance and Controls Standards
- Privacy and Data Protection
- Regulatory Considerations
- What Could Go Wrong
What are the Data Governance and Control Standards?

RPA needs a **digitization strategy**; prioritize the right processes, governance approvals, and development, testing & deployment protocols. It also needs an **infrastructure to manage the new robotic workforce**, and support future RPA changes.

- Overarching governance framework for adoption of RPA and alignment to risk, compliance and IT/data frameworks
  - Have we selected the right processes?
  - Have we optimized processes before we automated?
  - Are all upstream & downstream linkages known?

- Management and ongoing support and maintenance of robots
  - Who will oversee robot operations?
  - How do we manage changes?
  - Have we developed a recovery plan?
What about Privacy and Data Protection?

Privacy and Data Protection need to be considered for RPA, especially if the task involves the processing of personal information

- Heightened risk of privacy breaches that occur through technology innovations
- Currently, no specific guidance on RPA companies
- Take reasonable steps to implement practices, procedures and systems that will ensure privacy compliance
- What vendor management provisions will you establish and maintain to verify how data might be accessed?
What are the Regulatory Considerations?

Given that RPA is an emerging technology, there are no standards or formally agreed upon industry controls specific to RPA

- RPA adoption is business driven but control functions must ensure control standards
- Critical to ensure that control standards are deployed for the rollout & management of RPA
- Does this automation affect financial reporting processes and Sarbanes-Oxley controls?
- Understand cross border rules governed by regulatory bodies like FINRA and the SEC
What Could Go Wrong?

Need a post-deployment review to ensure the processing and decisions made by the robot align with expectations

- **Risk of missing rules**
  - Basic RPA can only do what it’s been told to do. Often humans follow innate rules that are without conscious thought applied, decisions just make natural sense to the human operator and aren’t documented.

- **Processes are not mapped correctly**
  - Automated activities may be incorrectly performed or incomplete. Automating an inefficient or poorly controlled process only amplifies the issue.

- **Natural human safeguards removed**
  - Where there are many transactions and many users, errors may often not be widespread across the business process. With automation, if you get it wrong, you consistently get it wrong.
What Are the Impacts to Internal Audit?

- Need to understand the technology
- Opportunity to influence control design
- Potential to increase audit efficiency
- Free up capacity to focus on higher priorities
- Enhance ability to add valuable insight
- Need to develop new testing approaches
- Consider need for changes to IA staffing model
